THE TOTAL MODULAR EXHIBITION SOLUTION

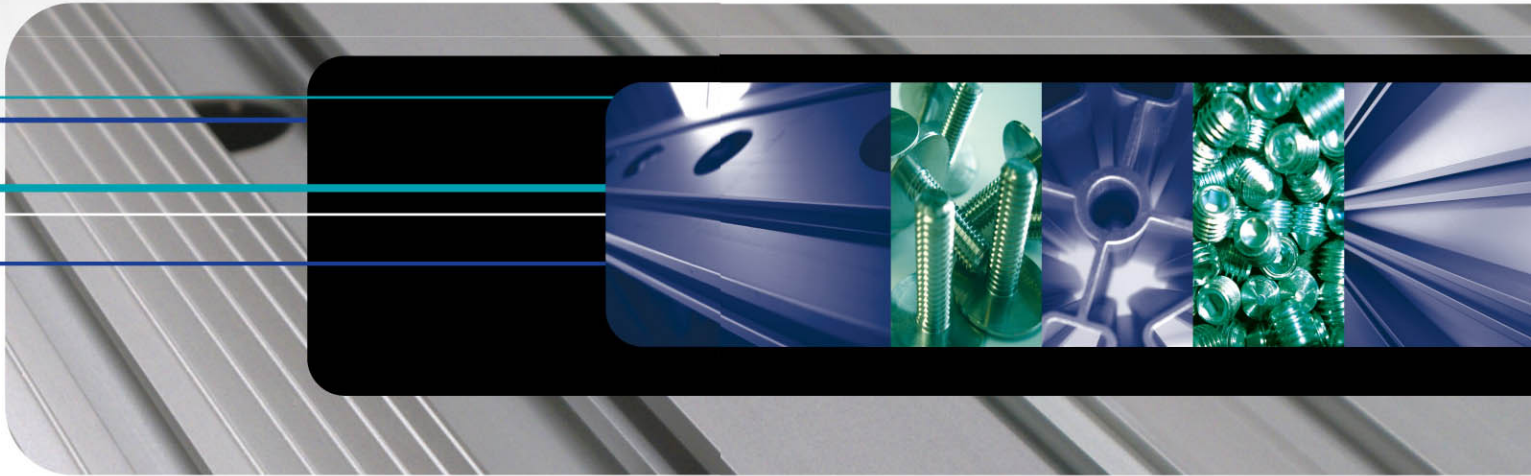

Linx
Exhibition Systems

THE LINX CONCEPT

From a freestanding banner unit to a double deck, to be hired for a single event or purchased for a multi-year series of shows, the Linx Modular Exhibition System can suit every requirement.

THE LINX SYSTEM

The Linx Modular Exhibition System is made from anodised extruded aluminium, with a large selection of standard profiles to facilitate re-configuration of existing stands, and a range of standard and customised accessories to make sure you stand out at any show.

THE LINX SERVICE

From your initial brief we offer a free CAD design service, backed up by our in-house production, installation, stand storage and full show management.

THE LINX EXPERIENCE

With over 20 years experience in designing and building exhibition stands throughout the world, we have the in-house knowledge and resources to make your exhibiting experience an enjoyable one!

THE LINX DESIGN PROCESS

From initial creative concept through to production and installation:

Linx is a cost effective and environmentally viable solution to all your exhibiting needs...

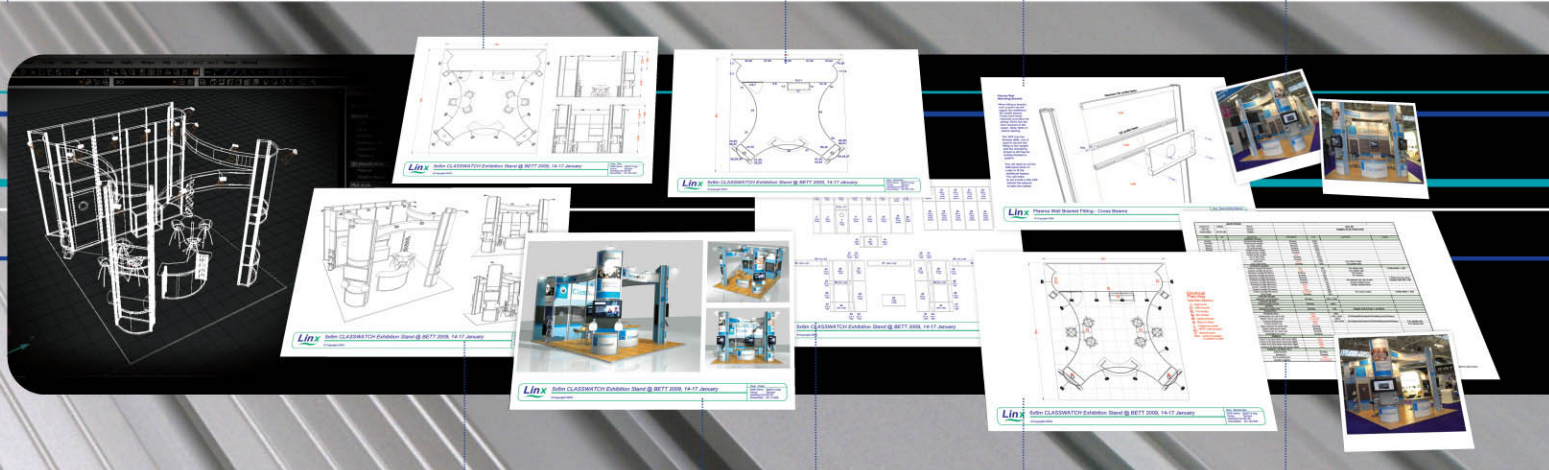

From the initial brief we can produce a creative solution to meet and enhance your marketing plan fulfilling your individual requirements on budget and on time!

All plans are produced from Autocad using our own programmed system. This ensures all plans are accurate, cost effective and produced on time.

The panel layout is numbered to ensure that graphic designers and installers know the location of each panel.

When required, detailed assembly instructions can be provided to simplify installation.

Digital photographs are taken and stored for ease of future reference.

Stand plans and elevations are produced for every stand we design, for submission to the show organisers for approval.

A colour render helps to visualise the final look and feel of the stand.

Each panel size is clearly shown to assist with the design and layout of the graphics.

The electrical plan details the location of each power socket, internet points and AV requirements to ensure accurate ordering and placement of on-site services.

A full list of every component required is produced for each stand. The stand is checked against this list when going to site and again when being returned to storage.

The Linx Design Process details every stage from concept to completion, and ensures accurate records for your next stand requirement.

INDUSTRY LEADERS IN QUALITY & SERVICE

The Linx Modular Exhibition System provides you with creative freedom through its range. The limit to which you can develop designs & create impactful structures is equalled by our commitment to fulfilling your requirements and supporting you with our project management & quality of service.

From the initial enquiry, our experienced team will discuss your requirements and start the creative proposals.

Our design team will supply detailed CAD designs, 3D colour visuals, plans, elevations, panel plans & layouts, electrical plans – everything that is required to progress the finished stand!

Our in-house production team also run a CNC router – this allows us the freedom to add bespoke elements to your design.

Our experienced and dedicated team of installers provide install and breakdown services in the UK, Europe and Worldwide.

The Linx raised floor system is the quickest and easiest way to add a raised floor to your stand.

With years of experience dealing with electrical and AV contractors, you can be confident in our ability to manage the smooth running of your stand.

Once the stand is completed, checked and cleaned down – we're ready to handover to you for the open event!

After your exhibition, rest assured that your exhibition system and graphics are stored in our warehouse facility, ready for the next event.
